(TR) +90 533 875 9405 | (NG) +234 913 174 7343

Technical Skills:

Programming Languages: C, C++, Python, SQL, Rust, TypeScript,

Data Science & Machine Learning: Pandas, NumPy, Scikit-learn, PyTorch, Keras, OpenCV, MATLAB

Data Engineering: ETL/ELT Pipelines, AWS Services (Glue, Redshift, S3, Athena, EMR etc), Data Warehousing, Data Integration and Orchestration, Data Scheduling (with jobs)

Web & Backend: Express.js, REST API's, FastAPI

Cloud & DevOps: AWS, Docker, Kubernetes, Cloudflare, GitHub, Github Actions

Tools: Linux (Ubuntu, Kali and Parrot OS)

Experience

IT & Digital Solutions Intern

RealtyPro Investment Global Limited Lagos , Nigeria

07/2025 - 09/2025

Responsibilities:

- Improved online property listing visibility by optimizing SEO metadata and structured listing data, increasing digital inquiry conversion rate.
- Maintained and cleaned CRM and Excel customer datasets, improving follow-up response speed and data accuracy.
- Provided Tier-1 IT support including workstation setup, network troubleshooting, and system configuration.
- Built weekly reporting dashboards using Excel analytics and data visualization to track sales trends and customer engagement.
- Assisted website integration of online lead forms into internal email and CRM workflows, improving lead capture automation.
- Collaboration: Worked closely with sales agents to integrate technology into their client presentations (interactive maps, digital brochures).

Junior Data Engineer

Cysec Technologies Ltd. Abuja, Nigeria

06/2026 - 09/2026

Responsibilities:

- Set up and managed the company's cloud environment on AWS (using services like S3, EC2, and IAM), enhancing data accessibility for the team and security compliance by 40%.
 - Built a private custom data ingestion tool enabling company staff to report and log progress and other key metrics, improving internal reporting efficiency by 80% as everything was done manually before.
 - Extracted various ingests from other company staff who used the tool into a custom PostgreSQL database at set intervals then automated the ETL process using AWS Glue Scheduling to orchestrate data workflows
 - Managed data storage by transferring the processed data from the custom Postgres DB to Amazon S3 within the company's AWS cloud environment, enhancing data accessibility and security compliance by 35%.
 - Supported data warehousing solutions with Amazon Redshift and Snowflake, improving storage and retrieval times by 30%.
 - Collaborated with cybersecurity analysts using Jira and Confluence to translate requirements into data engineering solutions, contributing to a 20% reduction in incident response time.
 - Applied data engineering best practices and put in cost-reduction practices on the AWS console within a security-focused environment, ensuring total compliance with company security standards.
-

Projects

1. Antlyst: A data analytics platform that visualizes and analyzes data from it's raw form to be able to provide meaningful business impact

Tech Stack: Next.js, React, TypeScript, Prisma, Plotly.js, Polars, Cloudflare R2, Clerk Auth

- Built full-stack SaaS platform allowing users to upload CSV datasets and generate automated dashboards and ML-based insights.
- Designed backend data ingestion pipeline supporting structured dataset uploads and transformation
- Implemented interactive data visualization dashboards using Plotly
- Integrated authentication and cloud storage for multi-user data isolation and secure storage
- Enhanced AI insight module for computerized dataset anomaly detection and pattern discovery

2. Real-time Vital Signs Monitoring System: Using Computer Vision and Neural Network's trained on Embedded

Raspberry PI

A hybrid non-contact and wearable system for real-time vital signs monitoring in clinical settings. This project uses computer vision and machine learning to monitor temperature, blood pressure (estimated), pupil dilation, heart rate, respiratory rate, and patient's age. A band was made with an ESP32 chip, MAX 30102 Pulse Oximeter, MPU 6050 IMU where my custom Neural Network was trained on this chip for also detecting continuous heart rate and respiration activity.

- Improved a real-time age estimation model using EfficientNet-B0 architecture, achieving 1-3 year accuracy across all age groups
- Implemented face detection and alignment using MediaPipe for robust pre-processing of the UTKFace dataset
- Constructed custom loss functions (Huber Loss, age-group weighted) to improve prediction accuracy on edge cases
- Built a vitals overlay system displaying real-time metrics at 30fps using OpenCV

Tech Stack: Python, PyTorch, EfficientNet, MediaPipe, OpenCV, UTKFace Dataset

Github link: github.com/anthonyy616/health-project

3. SQL Optimizer CLI: Built a command-line SQL analysis tool in Rust supporting PostgreSQL, MySQL, and SQLite, using async I/O (Tokio) and a trait-based connector abstraction for multi-database support from even third-party providers like Supabase, Neon, Convex etc. working on only UNIX native environments

- Implemented database connectors with real connection handling, TLS support, and schema introspection (tables, columns, indexes) via information_schema and SQLite PRAGMA queries
- Designed a unified query execution plan model that normalizes EXPLAIN output across PostgreSQL (JSON format) and MySQL (JSON format) into a common internal representation
- Built a SQL parsing and static analysis layer using sqlparser to detect anti-patterns (e.g., unbounded SELECT *, N+1 query patterns via subquery detection) and basic SQL injection risk indicators
- Developed a CLI with multiple subcommands (single-query analysis, interactive REPL, batch processing) and multiple output formats (text, JSON, YAML)

Tech Stack: Rust, MySQL, PostgreSQL

Github link: <https://github.com/anthonyy616/sql-optimizer-cli>

Education

European University of Lefke, Lefke , Northern Cyprus 99070

Bsc. Computer Engineering

06/2027

Completed courses in: Data Structure and Algorithms, Object-Oriented Programming, Digital Systems design, Micro-processors, Circuit Design and Analysis, Operating systems, and Computer programming (in C and C++).

Honor's Student

Certificates

Google IT Support Specialist Certificate

Oracle OCI AI Foundations Certificate
